☐ furnished subsequently to this Authority for the purposes of search and/or examination				
☑ received by this Authority as an amendment on				
In addition, in the case that more than one version or copy of a sequence listing and/or table(s) relating thereto has been filed or furnished, the required statements that the information in the subsequent or as appropriate, were furnished.	ı			
Additional observations, if necessary:				

PCT/NL2004/000420

#### Re Item III.

- 1. Present claims 1-6, 8-11, 13-16 relate to a composition defined by reference to a desirable characteristic or property, namely "pediocin-producing pediococci", "..., wherein the pediococci are characterised by a survival rate...", "pediococci are isolated from human faeces", "bacteriocin produced from pediococci...", "antibiotic derived from quinolones". The claims cover all compositions having this characteristic or property, whereas the application provides support within the meaning of Article 6 PCT and/or disclosure within the meaning of Article 5 PCT for only a very limited number of such compositions. In the present case, the claims so lack support, and the application so lacks disclosure, that a meaningful search over the whole of the claimed scope is impossible. Independent of the above reasoning, the claims also lack clarity (Article 6 PCT). An attempt is made to define the composition by reference to a result to be achieved. Again, this lack of clarity in the present case is such as to render a meaningful search over the whole of the claimed scope impossible.
- 2. Claims 1-10 relate to the use of a pharmaceutical preparation for the prophylaxis or treatment of diseases which are functionally defined "for inhibiting pathogenic strains in the gastrointestinal tract", or "secondary disorders being preferably selected from water disturbances, mineral balance disturbances, malnutrition, dysfunctioning of tissues, dysfunctioning of organs, dysfunctioning of organism, and mixtures thereof", which encompass a multitude of different diseases. The claims thus cover a rather large number of diseases, whereas the application provides support within the meaning of Article 6 PCT and disclosure within the meaning of Article 5 PCT for only a very limited number of diseases. Consequently, the claims lack support and the application lacks disclosure. Independent of the above reasoning, the claims 1-10 also lack clarity because it is not fully possible to determine the diseases for which protection might legitimately be sought (Article 6 PCT).

Consequently, the search has been carried out for those parts of the claims which appear to be clear, supported and disclosed, namely those parts relating to the use of P. acidilactici or P. pentosaceus in the treatment of bacterial infection of the gastrointestinal tract and diarrhoea; and with due respect to the general idea of the invention.

No opinion will be given in respect of subject matter which is not covered by the

#### search report (Rule 66.1(e)PCT)

#### Re Item V.

The following documents are referred to in this communication:

D1: XP-002241735 D2: WO9729645

#### 1 NOVELTY (Art. 33(2) PCT)

- 1.1 The subject matter of the present application, **insofar as clear**, is new with regard to D1-2:
- 1. Document D1 discloses the use of pediococci for the manufacture of a composition for inhibiting pathogenic strains in the gastrointestinal tract (probiotic). The P. acidilactici strain P-2 disclosed in D1 however has a survival of 49%, according to the Survival Rate Test in the application (see example 1 rate the application in which several strains of pediococci are compared with regard to the (table 3) of survival rate in stomach medium (pH3)). Although no figures are shown for Pediococcus pentosaceus (FF), document D1 states that "P. acidilactici strain P-2 had the strongest capacity for surviving acidic conditions and 0.3% bile salts" (cf. page 299, left column: "Conclusion"), thus indicating that the survival rate Pediococcus pentosaceus (FF) is even less than that of P-2. Moreover, at pH 4 the count of viable bacteria in all investigated strains was less than 5 log cfu/ml (cf. page 299, left column, line 1-6)). Document D1 does not disclose the Pediococus acidilactici strain LMG P-21927.
- 2. Document D2 discloses a health composition comprising living organisms, among which *P. pentosaceus*, *P. acidilactici* are enlisted, and bacteriocin, among which is pediocin mentioned, as animal feed supplement or composition for preventing pathogenic bacteria from adhering to the mucous membrane surfaces, restoring bacterial flora, preventing or treating infections and diarrhoea in the gut (cf. whole document). D2 does not specifically disclose a pediocin-producing

PCT/NL2004/000420

pediococcus having a high survival rate in the conditions of the the gastrointestinal tract. **Document D2 does not disclose the acidilactici strain LMG P-21927.** 

stomach and **Pediococus** 

Therefore the subject matter of claims 1-16, insofar as clear, is new (Article 33(2) PCT).

### 2 INVENTIVE STEP (Art. 33(3) PCT)

2.1 D1, which is the closest prior art, suggests the use of probiotic lactic acid bacteria with good survival capacity in the stomach and the gastrointestinal tract for the therapy of diseases of the gastrointestinal tract associated with pathogenic bacteria. The Pediococcus acidilactici (P2) is disclosed in D1 as the strain having the best survival capacities under acidic conditions and at the higher (a survival rate of 49% according to the Survival Rate Test in the application). From this the subject mater of the present application differs in that survival rate of at least 80% according to the survival rate test of the application.

Thus the problem to be solved by the present application can be considered as provision of a pediocin-producing pediococcus strain(s) with high survival capacities (>80% as defined by the survival rate test) in the stomach and the gastrointestinal tract.

The solution proposed is the use of the pediocin-producing pediococcus strain LMG P-21927 isolated from human faeces which ha a high survival rate (at least 80%) in the conditions of the stomach and the gastrointestinal tract.

Although the use of probiotic lactic acid bacterial strains with good survival capacity under the conditions of the stomach and the gastrointestinal tract are suggested in D1, the use the pediocin producing Pediococcus acidilactici strain LMG P-21927 with a survival rate of at least 80% is not suggested in D1. Document D2 discloses a health composition comprising living organisms, among which P. pentosaceus, P. acidilactici are enlisted, and bacteriocins (pediocin A, nisin, pediocin

# INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/NL2004/000420

AcH and others) as animal feed supplement or composition for pathogenic bacteria from adhering to the mucous membrane surfaces, bacterial flora, preventing or treating infections and diarrhoea in the gut document).

preventing restoring (cf. whole

However, D2 does not disclose a pediocin-producing pediococcus having a good survival rate in stomach and the GI tract, as it focuses rather on the health effect of the total composition of strains, organic acids and bacteriocins. Moreover, the bacteriocins could also include nisin, which is detrimental also to beneficial strains in the intestines (see page 2, line 1-4 of the application). Thus D2 does not suggest the use the Pediococcus acidilactici strain LMG P-21927 which has a survival rate of at least 80%.

Therefore, in view of document D1-2, the subject-matter of the present application, **insofar as clear**, appears to involve an inventive step in the sense of Art. 33(3) PCT.

3 INDUSTRIAL APPLICABILITY (Article 33(4) PCT)

Claims 1-16, insofar as clear, fulfil the requirements of (Article 33(4) PCT).

#### AMENDED CLAIMS

- Use of pediocin-producing pediococci for the manufacture of a composition for inhibiting the growth of pathogenic strains in the gastrointestinal tract, wherein the pediococci are characterised by a survival rate as per the Survival Rate Test defined herein of at least 80 %.
- 2. Use according to claim 1, wherein the survival rate is at least 90 %.
- 10 3. Use according to claim 1 or 2, wherein the pediococci are isolated from human faeces.
  - Use of pediocin-producing pediococci for the manufacture of a composition for inhibiting the growth of pathogenic bacteria in the gastrointestinal tract, wherein the pediococci are isolated from human faeces.
  - 5. Use according to any one of the preceding claims for preventing and/or treating infections by pathogenic bacteria in the gastrointestinal tract, diarrhoea, and/or secondary disorders associated herewith.

20

15

5

- 6. Use according to claim 5, wherein the secondary disorders comprise water disturbances, mineral balance disturbances, malnutrition, dysfunctioning of tissues, dysfunctioning of organs, dysfunctioning of organism, and combinations thereof.
- Use according to any one of the preceding claims, wherein the pediococci comprise Pediococcus acidilactici strain LMG P-21927.
  - 8. Use according to any one of the preceding claims, wherein the pathogenic bacteria are Gram-negative bacteria.

30

9. Use according to any one of the preceding claims, wherein the pathogenic bacteria are Gram-positive bacteria.

10. Use according to any one of the preceding claims in combination with one or more further probiotics selected from the group consisting of Lactobacillus rhamnosus, L. plantarum, L. fermentum, L. acidophilus, L. reuteri, L. casei, L. johnsonii, L. gasseri, L. crispatus, L. helveticus, L. salivarius, L. lactis, L. brevis, L. paracasei, L. sakei, Bifidobacterium animalis, B. lactis, B. adolescentis, B. longum, B. infantis, B. bifidum and B. breve.

5

10

20

- 11. An isolated pediocin-producing pediococcus characterised by a survival rate as per the Survival Rate Test defined herein of at least 90 %.
- 12. A pediococcus according to claim 11 wherein the pediococcus is *P. acidilactici* as deposited at BCCM<sup>TM</sup>/LMG under No. LMG P-21927.
- 13. A health-promoting composition comprising a pediococcus according to claim 11 or
   15 12 as a probiotic component.
  - 14. A health-promoting composition according to claim 13, and further comprising a component selected from the group consisting of pediocin, additional probiotics, prebiotics, immunoglobulins, and mixtures thereof.
  - 15. A method for isolating pediocin-producing pediococci from a substrate, wherein the pediocin-producing pediococci is isolated by using a medium comprising xylose, an antibiotic derived from quinolones and pediocin.
- 25 16. A method according to Claim 15, wherein the substrate is human faeces.
